## What we provide at each dental care visit:

### CLINICAL EXAM:

- \* Brushing & Flossing techniques
- \* Gum color, texture & inflammation
- \* Bone loss
- \* Pathology
- \* TMJ/jaw & joint discomfort
- \* Evaluation for orthodontic needs/growth guidance
- \* Intra oral photographs

### CLEANING & ORAL HYGIENE INSTRUCTIONS:

- \* Removal of plaque, calculus and stain
- \* Polish & Fluoride treatment "Varnish"
- \* Review of home care brushing & flossing
- \* Reviewing nutritional diet/frequency of snacking & beverages
- \* Effect on the teeth

### HEALTH HISTORY REVIEW

Oral health can affect other health conditions such as:

- \* Acid reflux
- \* Diabetes
- \* Cancer, Heart disease
- \* Medication-dry mouth/staining

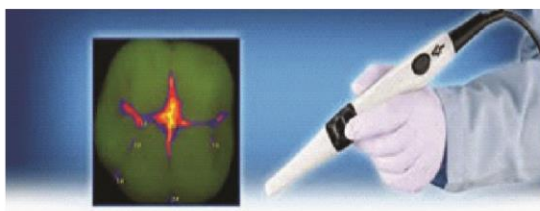

State of the art equipment is used, which will provide an accurate diagnosis of hidden decay. Our goal is to detect issues before problems occur.

### DIGITAL X-RAYS

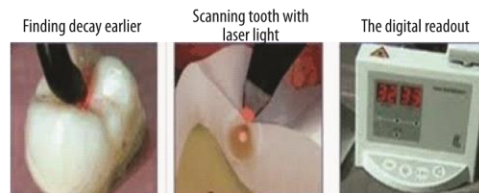

Digital x-ray sensors are used instead of traditional film. Using less radiation to produce an image.

### SPECTRA

Uses fluorescence to detect caries in fissures and smooth surfaces that may go unnoticed in X-ray images.

### DIAGNODENT

Early, initial cavities and hidden cavities can be safely detected using laser fluorescence technology.

### CARIVU

Transillumination technology makes normal enamel appear transparent while porous lesions trap and absorb the light showing possible cracks or cavities in the tooth.
